Science teachers from China visit Cascade High School

Visiting U.S. classrooms part of Beijing professional development program

As part of a three-year professional development program, a group of eight National Science Teacher Association conference teachers from Beijing visited science classrooms at Cascade High School to learn about U.S. science education.

Led by Drs. Norman and Judith Lederman from Illinois Institute of Technology, Chicago, "Having the opportunity to visit classrooms and see firsthand

how inquiry and student classroom instruction occurs was a highlight of their visit to the U.S.," shared Dr. Judith Lederman.

Representing a selection of a cohort of outstanding Beijing science teachers, "They were very impressed with the strategies Everett teachers used to encourage their students to work together and take responsibility to be curious self-motivated learners," shared Dr. Norman Lederman.

Everett Public Schools science classrooms are an international model and this was a perfect opportunity for these teachers to learn more on the teaching of Scientific Inquiry and Nature of Science.
