

Alert Email Whitelisting Information

For email messages generated by the service (such as email notifications) we recommend whitelisting based on email addresses (In the mail headers From:, Sender:, or Envelope FROM). Be aware that for robust email handling, the specific email addresses change, however all of the email will originate from one of the following domains safeschoolsalert.com, safecollegesalert.com, safepersonnelalert.com, or scenariolearning.com.

If you prefer to whitelist on the SMTP level, email will originate from SMTP servers at customers.safeschoolsalert.com.

Day-to-day business communication will come from the above listed domains, but may originate from a dynamic group of email services.
