New classroom materials for ninth-grade science under consideration

Review the materials on Monday, April 30, 3-6 p.m., [Community Resource Center](#), Port Gardner B

High school science teachers from across the district, facilitators and administrators from district science and engineering, learning management services, English language learners and special services departments synthesize research as part of the High School Science and Engineering Curriculum Materials Review Team.

What science and engineering classroom materials might freshmen students use starting next fall?

That's a question a team of 20 staff began studying in January in preparation for a recommendation the superintendent will consider in May.

The April 30 Open House for community, families, students and staff is an important part of the public process and a time for input. The team will use community input from Monday's gathering for their recommendation.

The superintendent will consider the recommendation before making a referral to the school board for its consideration and approval.
