Henry M. Jackson High School (Everett School District)

Grades 10 and 12

Introduction and Overview

This report presents results from the fall 2014 Healthy Youth Survey in Washington State. This survey was sponsored by the Department of Health, the Office of Superintendent of Public Instruction, the Department of Social and Health Services and the Liquor Control Board in cooperation with schools throughout the state of Washington.

This Multiple Grade Report does not provide comparisons to the state. To compare your results to the state sample, see the Multiple Grade State Sample Report for grades 6, 8, 10 and 12. This report are available at: <http://www.askhys.net/Reports> under State Reports.

Survey questions covering the same topics are grouped together when possible but be sure to consult the index for related questions when you are searching for information on a specific topic. The numbering in this report is not the same as the question order on the survey itself.

Additional information may be found in the Interpretive Guide posted to the Healthy Youth Survey web site: www.AskHYS.net/Reports

Survey Participation in this Report

	Grade 10	Grade 12
Number of students surveyed:	445	325
Number of valid responses:	424	308
Number of enrolled students*:	545	494
Your survey participation rate**:	78%	62%

* The estimate of enrolled students is based on figures from the 2014-2015 school year, provided by OSPI.

** The survey participation rate is the number of valid responses divided by the number of enrolled students.

Note: Results not available for non-surveyed grades or grades suppressed for under-participation. See Past Participation for details: <http://www.askhys.net/Past>

Caution about Participation Rates and Bias

Please use the following guidance when reviewing your results:

- 70% or greater participation—Results are probably representative of students in this grade.
- 40–69% participation—Results may be representative of students in this grade.
- Less than 40% participation—Results are likely not representative of students in this grade but do reflect students who completed the survey.

There may be limitations to your results even if you have a high participation rate. For instance, a particular group of students (say, the school orchestra) may have been away from school the day of the survey, and that could bias the results. It is important to acknowledge the potential limitations when using the results in this report. For reports summarizing results at the county or School District level, you should also consider whether the schools that participated represent all students in that area.

Small Numbers: Caution about Number of Students Participating

Results based on small numbers of students answering a question are unstable---that is, they could easily change with the absence from school of only a couple of students. This is especially the case when only a few students choose a particular answer option. Also, in this situation, the reported 95% confidence interval might be too narrow. Thus, use caution if fewer than 30 students answered a question and fewer than 5 students selected a given response option.

For example, if 20 students answered a question and of those 20 only 3 students answered "Yes", the estimate is unreliable.

See the Understanding Your Report section later in this report for a discussion of "confidence intervals" to help guide your interpretation of the results.

Key to the Notes

Five versions of the survey were used in the administration of the 2014 HYS. Forms A and B were given to secondary students (grades 8, 10, and 12). Some questions on the Forms were available on enhanced versions of the survey and used at the discretion of the school. Form A-enhanced included one optional question on sexual orientation and Form B-enhanced included six optional questions on sexual orientation, behavior and abuse. Form C was given to elementary students (grade 6).

A list of the topics asked and their location in the report are provided in the Questions by Topic section at the end of this report. The Questions by Form Type section provides a list of which Form each question was on.

The following notes are used throughout this report to document the differences between the questions on different versions and indicate the optional questions:

A = wording on Form A; B = wording on Form B; C = wording on Form C

† = additional question on the enhanced survey forms

Highlights of the Local Results

Your students reported the following behaviors and attitudes:

Substance Use

	Grade 10 % ($\pm$ CI)	Grade 12 % ($\pm$ CI)
Smoked cigarettes in past 30 days	6.8% ($\pm$ 2.4)	10.7% ($\pm$ 3.5)
Drank alcohol in past 30 days	19.5% ($\pm$ 3.8)	29.4% ($\pm$ 5.1)
Used marijuana or hashish in past 30 days	15.0% ($\pm$ 3.5)	22.1% ($\pm$ 4.7)
Binge drinking in past 2 weeks	10.7% ($\pm$ 3.0)	15.4% ($\pm$ 4.1)

Bullying and School Climate

	Grade 10 % ($\pm$ CI)	Grade 12 % ($\pm$ CI)
Carried a weapon at school in the past 30 days	5.4% ($\pm$ 2.2)	3.9% ($\pm$ 2.2)
Bullied in the past 30 days	23.8% ($\pm$ 4.1)	17.0% ($\pm$ 4.2)
Enjoyed being at school over the past year	34.4% ($\pm$ 4.6)	33.3% ($\pm$ 5.4)
Felt safe at school	86.0% ($\pm$ 3.3)	86.3% ($\pm$ 3.9)

Understanding Your Report

N's

In this report "n" is shorthand for "number"---the number of students who took this survey or who answered a survey question. N's are important! We also report the point estimates (%), and the 95% confidence intervals (CI).

Here is an example of how results are displayed in the report tables and charts.

How many students took this survey?

Look on page 2, under Survey Participation. The "number of students surveyed" is the number of surveys that we received. We have careful procedures for "cleaning" to remove surveys with many inconsistent or false answers – the "clean" surveys are the "number of valid surveys". Only valid surveys are presented in this report.

How many students answered each survey question?

The n's for each question vary. Why? There are several reasons:

- There are four versions of the grades 8, 10, and 12 survey – A, A-enhanced, B, and B-enhanced. Core questions are on all versions, so the n's for those questions are about the same as the number of valid surveys. For non-Core questions the n's will be about half, or less.
- Some versions of the survey had additional questions about sexual orientation, behavior and abuse. Schools that chose to not ask those additional questions will have no responses for those questions. [District and county reports may include some schools that DID ask those questions and some that DID NOT.]
- Not all students finish the survey, so questions near the end have smaller n's. [NOTE: the order of the questions in the report is not the same as on the survey itself.] Also, some students may decide to skip certain questions.

Here are examples from a district with 400 valid surveys --- notice how the n's change with each question type.

17. Have you ever, even once in your life: Used marijuana?		(n=398)	(n=4,000)	N for a core question (almost all students)
a. Yes	49.0% (±3.0)	46.0% (±1.0)		
b. No	51.0% (±3.0)	54.0% (±1.0)		
18. Have you ever, even once in your life: Used inhalants (things you sniff to get high)?		(n=200)	(n=2,000)	N for a question on only one version (about half the students)
a. Yes	11.0% (±4.0)	12.0% (±2.0)		
b. No	89.0% (±4.0)	88.0% (±2.0)		
100. How old were you when you had sexual intercourse for the first time? †		(n=100)	(n=1,500)	N for an additional sexual behavior question (about half, or less if some schools requested surveys without the questions)
a. I have never had sexual intercourse.	70.0% (±8.0)	75.0% (±4.0)		
b. 11 years old or younger	2.0% (±2.0)	2.0% (±1.0)		
c. 12 years old	2.0% (±2.0)	1.0% (±1.0)		
d. 13 years old	5.0% (±2.0)	4.0% (±1.0)		
e. 14 years old	8.0% (±6.0)	7.0% (±2.0)		
f. 15 years old	9.0% (±5.0)	8.0% (±2.0)		
g. 16 years old	3.0% (±3.0)	2.0% (±1.0)		
h. 17 years old or older	1.0% (±1.0)	1.0% (±1.0)		
150. Does your school have a counselor		(n=375)	(n=3,750)	N for a core question near the end of the survey (almost all, except students who don't finish the survey)
a. Yes	90.0% (±3.0)	95.0% (±1.0)		
b. No	5.0% (±2.0)	2.0% (±1.0)		
c. Not sure	5.0% (±2.0)	3.0% (±1.0)		

How many students are we talking about?

N's are only provided for the total number of students who answered a question, not the individual answer options. Some people find it useful to translate their point estimates (%) into the number of students.

For example, if 200 students are enrolled in the district and 10% ($\pm 2\%$) reported "Yes" they used inhalants in their lifetime, then an estimated 20 (± 4) students in the school use inhalants ($200 \times .10 = 20$; and $200 \times .02 = 4$). Enrollment numbers are available on page 2 under Survey Participation.

Confidence Intervals

It is unlikely that the point estimate (%) reported for each question is *exactly* the same as the "true" value for all your students. This report includes 95% confidence intervals (CI) to describe this uncertainty. If there is no bias in the data, then there is a 95% chance that the CI will include the true value. So for example, if the point estimate and CI are 51.5% ($\pm 1.5\%$), then there is a 95% chance that the true percentage is between 50.0% and 53.0%.

The size of your CIs depend in part on the n for each question – as more students answer a question, your point estimate is likely to be closer to the "true" value. If you are a small school, district or county your CIs will be large. The confidence interval does not take into account the participation rate – in other words, a low participation rate can create bias which will not be reflected in the CI.

How can you "use" confidence intervals?

CIs help you to decide if the differences between your students at different grade levels are statistically significant.

For an example, let's say your 8th Grade students report 25% $\pm 5\%$. That means that the CI is between 20% and 30% Here is the math: $25\% - 5\% = 20\%$, and $25\% + 5\% = 30\%$

Using CIs, you can decide if the difference between your 8th grade and 10th grade students are statistically significant:

1. A significant difference:

- 8th Grade students report 25% $\pm 5\%$, so the point estimate is 25% and the CI is 20% to 30%
- 10th Grade students report 36% $\pm 3\%$, so the point estimate is 36% and the CI is 33% to 39%
- The CIs don't overlap, so the difference is significant

2. Not a significant difference:

- 8th Grade students report 25% $\pm 5\%$, so the point estimate is 25% and the CI is 20% to 30%
- 10th Grade students report 28% $\pm 3\%$, so the point estimate is 28% and the CI is 25% to 31%
- The CI for your 8th Grade students overlaps the point estimate for 10th Grade students, so the difference is not significant

3. Not sure if there is a difference:

- 8th Grade students report 25% $\pm 5\%$, so the point estimate is 25% and the CI is 20% to 30%
- 10th Grade students report 32% $\pm 3\%$, so the point estimate is 32% and the CI is 29% to 35%
- The CIs overlap, but don't include the other point estimates, so you don't know for sure if they are really different without using the significance testing tool described in the next paragraph.

More information about interpreting CIs is available on the HYS Training web page at www.AskHYS.net/Training. The Training web page includes past HYS trainings materials and a "Tool for Determining HYS Statistical Significance". Use the "tool" to find out if your results are significantly different.

More Information

Much of the information on the Healthy Youth Survey is available online at www.AskHYS.net.

- Under HYS Results, you can find these "Frequency Reports". Also included is the 2012 Interpretive Guide with a detailed overview of the reports, information on statistical issues and how to use your data. There are also topical fact sheets and a data query system where you can run your own simple analysis.
- Under Training, there are copies of past HYS training workshop materials and the tool for testing significant differences.

Alcohol, Tobacco and Other Drug Use

Alcohol, tobacco, and other drug use has been a major concern in this country for many years. The consequences of ATOD use are well known. In the short term, ATOD use interferes with positive physical, emotional, and social development. In the long term, ATOD use is associated with delinquency and criminal activity, unintended injuries, and a variety of health complications including shorter life expectancy. Tobacco use is the world's leading cause of preventable death, disease, and disability. This section provides information about lifetime ATOD use (which in part reflects experimental use), use in the past 30 days (i.e., current use), and other tobacco-, alcohol-, and drug-related issues.

Lifetime Use

Have you ever, even once in your life:

16. Smoked a cigarette, even just a puff? (Computed from question 222)	(n=194)	(n=149)
a. No	87.1% (±4.8)	79.2% (±6.6)
b. Yes	12.9% (±4.8)	20.8% (±6.6)
17. Drank more than a sip or two of beer, wine, or hard liquor (for example: vodka, whiskey, or gin)? (Computed from question 17 or 223)	(n=411)	(n=305)
a. No	55.7% (±4.8)	40.7% (±5.5)
b. Yes	44.3% (±4.8)	59.3% (±5.5)
18. Used marijuana? (Computed from question 18 or 221)	(n=411)	(n=305)
a. No	74.9% (±4.2)	65.2% (±5.4)
b. Yes	25.1% (±4.2)	34.8% (±5.4)
19. Used inhalants (things you sniff to get high)?	(n=193)	(n=149)
a. No	91.7% (±3.9)	91.9% (±4.4)
b. Yes	8.3% (±3.9)	8.1% (±4.4)
20. Used heroin?	(n=194)	(n=149)
a. No	94.8% (±3.1)	96.0% (±3.2)
b. Yes	5.2% (±3.1)	4.0% (±3.2)
21. Used methamphetamines (meth, crystal meth, ice, crank)? Do not include other types of amphetamines.	(n=193)	(n=149)
a. No	93.8% (±3.4)	96.0% (±3.2)
b. Yes	6.2% (±3.4)	4.0% (±3.2)

	Grade 10	Grade 12
	% (± CI) (n=194)	% (± CI) (n=149)
22. Used cocaine?		
a. No	94.8% (±3.1)	93.3% (±4.1)
b. Yes	5.2% (±3.1)	6.7% (±4.1)
23. Used steroids (muscle builders) without a doctor's prescription?	(n=194)	(n=148)
a. No	95.4% (±3.0)	93.9% (±3.9)
b. Yes	4.6% (±3.0)	6.1% (±3.9)

[Question 24 appears only on the elementary version of the survey.]

30-Day Use (Use in the Past 30 Days)

During the past 30 days, on how many days did you:

	(n=414)	(n=307)
25. Smoke cigarettes?		
a. None	93.2% (±2.4)	89.3% (±3.5)
b. 1-2 days	1.9% (±1.3)	3.6% (±2.1)
c. 3-5 days	1.4% (±1.2)	2.0% (±1.6)
d. 6-9 days	1.2% (±1.1)	0.7% (±0.9)

Other Health Concerns

Nutrition and Fitness

This section provides results regarding other health concerns including nutrition and fitness, health conditions and health care, safety, behaviors related to intentional injury, depression, and gambling behavior. Proper nutrition and exercise are critical components of a healthy life, as is access to preventive health care. Safety-related behaviors, such as wearing a seat belt when in a moving vehicle, can profoundly influence the outcome of an accident. Injury is the leading cause of death for adolescents aged 10 to 19, and violence contributes to injury-related deaths. People who are depressed experience a range of symptoms, and depression is associated with suicidal behavior.

Obese: "Obese" includes students who are in the top 5% for body mass index by age and gender based on growth charts developed by the Centers for Disease Control and Prevention (2000). "Overweight" includes students who are in the top 15% but not the top 5%.

66. Obese or overweight? (Computed from numeric responses to "How tall are you without your shoes on?" and "How much do you weigh without your shoes on?")

Quality of Life

Health-related quality of life is an individual's or group's perceived physical and mental health over time. At the individual level it involves a person's health and health-related conditions; at the community level it involves conditions that influence people's health. This section contains the results of the survey questions related to individual quality of life.

Risk and Protective Factors

Decades of research have shown that certain risk factors are associated with increased likelihood of health risk behaviors including ATOD use, violence, and delinquent behaviors. Similarly, research from Drs. Hawkins and Catalano and associates at the University of Washington, has shown that protective factors exert a positive influence against the negative influence of risk factors. The premise of the risk reduction and protective factor enhancement approach to prevention is that preventing a problem before it occurs requires addressing the factors that predict the problem. Ideally, this strategy entails discovering the causes of the problem behavior and influencing those causes. Many of the survey questions were used to assess students' status on risk and protective factors in the community, school, and peer-individual domains. Composite scales were computed for use in local program planning.

Risk and Protective Factor Scale Results and Graphs

For each risk factor scale, the percentage of students who are at risk (i.e., who agreed with statements that predict ATOD use or other problem behaviors) is reported; higher percentages indicate that more students are likely to engage in problem behaviors. For each protective factor scale, the percentage of students who are resilient (i.e., who agreed with statements that predict the ability to resist ATOD use or other problem behaviors) is reported; higher percentages indicate that fewer students are likely to engage in problem behaviors. These percentages are based on computational methods provided by the University of Washington's Social Development Research Group.
