STEM: Family STEM

Night

STEM Leadership Team

Family STEM Night was held this past week at the Future of Flight Aviation Center. Local companies and organizations offered hands-on activities featuring the cutting edge science, technology, engineering, and math that is being created and used in our local area. Everett Public Schools displayed the Engineering is Elementary component of the K – 5 science curriculum that allowed participants to engage in activities that concentrated on magnetic levitation and wind turbines. Another EPS activity allowed students the chance to use a motion detector as they tried to replicate a given distance-time graph while they walked. Two EPS elementary schools also presented STEM projects at the event. It was an evening of engineering, gadgets , and fun for all the families that attended.
